

**Multi-shot plug and  
perf system —  
purpose-built for  
ultimate performance**

## DS Intensity™

### THE DIFFERENCE:

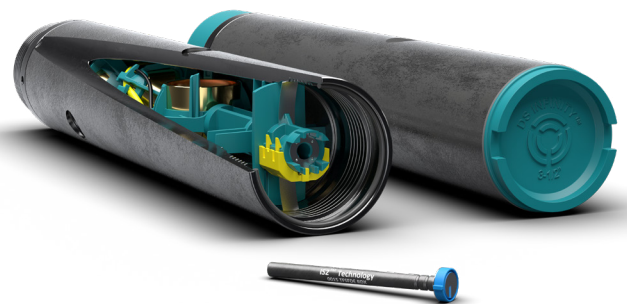

**Compact, customizable, multi-shot perforating system with greater entry hole diameter and uniformity**

Modern well designs increasingly call for perforating systems that deliver larger and more uniform entry hole diameters, that are more compact to offer more guns per stage, and that can be oriented to target the preferred fracture plane.

The DynaEnergetics DS LoneStar™ single-shot perforating system delivered. Now, we've built a customizable system on the same technology, tailor-made for multi-shot applications and your unique operation: DS Intensity™

DS Intensity is available in standard (standard helical charge pattern) and oriented models (aligned charge pattern), and is exclusively equipped with LoneStar frac optimized shaped charges, customizable for entry hole diameter, quantity, and phasing.

Designed for your precise application and built in-house, from the ground up, DS Intensity offers superior precision and performance.

# Unmatched in explosive net energy, and entry-hole uniformity

## THE ADVANTAGE:

### Bigger charges, better performance, greater value, best experience

#### Bigger charges

Compared with standard unconventional perforating guns, the frac optimized shaped charges fitted in the DS Intensity perforating system deliver over 30% more explosive energy. Large, ultra-consistent entry hole diameters (EHD) range from 0.40" to 0.70" with only 3% deviation and deliver significantly higher formation penetration.

#### Better performance

The result? Greater area open to flow and greatly increased formation contact area for unmatched downhole performance.

#### Greater value

Lower completion costs and add value with the trouble-free, high-performance DS Intensity perforating system, proven to:

- Improve cluster efficiency
- Reduce treatment pressures
- Increase flow rates
- Achieve projected pump rates more quickly
- Reduce pump times
- Lower chemical, water and fuel usage
- Reduce environmental impact

#### Best experience

Among the shortest on the market today, the simplified, modular DS Intensity perforating system reduces overall gun length without jeopardizing mechanical integrity. With unmatched flexibility, it can be configured to achieve efficient, trouble-free performance with virtually any perforating program.

Like all members of the DynaEnergetics Factory-Assembled, Performance-Assured™ DynaStage™ (DS) product family, DS Intensity arrives at the wellsite fully assembled and ready to arm with the wireless IS2™ TF Intrinsically Safe™ Plug and Go™ detonator. Test DS Intensity and its entire detonation system at surface for unmatched reliability and peace of mind.

**DS Intensity.** Bigger charges. Better performance.
